LinkNxtGen
## Making it Easy to '*Trust the Process*'

What is LinkNxtGen?

LinkNxtGen is a hybrid resource management, project management and process and procedure management tool based on industry best practices. LinkNxtGen is available now on Google Play and the Apple Store for your mobile device and available for desktop use. LinkNxtGen captures detailed self-reported information on the processes, procedures, tools, and deliverables that staff use to perform their work assignments as well as the time spent on those processes and procedures. LinkNxtGen offers companies insights into their organization and customers by:

❑ Supporting all levels of the organization including strategic, mid-tier management, and operations
❑ Supporting continuous process improvement and recording all changes that occur within the system for future reference
❑ Supporting productivity by driving process standardization while lowering new or replacement employee learning curves

LinkNxtGen is available across multiple platforms and staff can use it from anywhere and at any time. Under the following 5 areas, below, staff can input unlimited data to show multiple levels as to the steps and processes used to complete a task.

How does LinkNxtGen Work?

LinkNxtGen offers a platform that can automate business processes and responses throughout the life cycle of any given project. Using Artificial Intelligence and Machine Learning, LinkNxtGen allows management to have transparency into the full life cycle of their organization by standardizing critical processes that bring data into a common format enabling the user to perform key analytics, research, sharing of tools and methods. Highlights of LinkNxtGen features include:

❑ Contains multi-level dashboards with data anchored information for front line employees, mid-management, and executive level program managers for effective human capital load balancing
❑ Contains over 125 predefined, commonly used Technical Labor categories in its database with definitions
❑ Eliminates geographical challenges by being available in both mobile and desktop form
❑ Allows users to run "what-if" scenarios, such as, determining who can support new requirements while ensuring no current tasks are dropped
❑ Offers management an overall look at workforce utilization which allows them to see if someone is being over or under-utilized, this outcome can provide cost-savings across the organization

How Can LinkNxtGen Help your organization?

BUSINESS PROBLEM	HOW LINKNXTGEN CAN HELP
Lack of Clear Direction/Ambiguity	LinkNxtGen provides management with transparency into their organization.
Lack of Information Sharing	LinkNxtGen provides a platform for individuals, groups (teams) and management to share information in real time regarding what is happening in the workplace. This allows managers the ability to review things at the micro or macro level while having control over approval.
Lack of Understanding Company Process and Procedures, Tasks and Steps	LinkNxtGen data is built with a descending pathway that starts with the Process, Procedure, Task, down to the Step level. This provides an organization with a high-level view of what is happening within the organization as well as providing a view of the granular steps taken to perform a task under a project.
Not Being Able to Perform Predictions	LinkNxtGen has trending capabilities to assist managers with being able to see trends and allows for making objective predications for the future.
Lack of Financial Management	LinkNxtGen allows managers to see how much resources cost their company for each Project, Task and Step by Geographical locations. The LinkNxtGen system will allow managers to make key decisions on resource allocation based on the cost associated with a project.
Lack of Regulatory Compliance	LinkNxtGen can house all the ISO and CMMI standards which can be monitored to ensure compliance.
Lack of Monitoring Performance	LinkNxtGen allows managers to see where additional resources are needed, where more funding is needed, and where more control and monitoring is needed. These tools allow managers to determine the risk level of any Process, Procedure, Task or Step.
Lack of Quality Recruitment	LinkNxtGen allows managers to see where employees may need additional training, where resources need to be reallocated in order to meet deadlines and where employees are overburdened and/or under tasked.
Lack of Updated Technology	LinkNxtGen allows companies to pull key metrics which can be used to make strategic and informative decisions about their organization/portfolio at a high level or at any defined key organization configuration level.
Lack of Positive Customer Service	LinkNxtGen provides the organization with the ability to have a vast amount of relevant and critical information at their fingertips! Mangers will be able to respond to key informational requests in a timely and efficient manner ensuring customer satisfaction.
Lack of Communication	LinkNxtGen allows for built in approval and permission settings. With employees loading the application from the bottom and managers loading from the top, the approval process happening throughout; this will result in increased communications on projects and increased satisfaction of all employees, with program efficiencies becoming a by-product of the application.
