

Staying Relevant and in the Game

Part One – The Competitive Global Market

Part One

The Competitive Global Market

To stay relevant in this competitive global market, Artificial Intelligence (AI) and Machine Learning (ML) must be embraced by the small business community. By 2030, AI is projected to add between \$13 trillion and \$15 trillion to the global economy. The small business owner needs to take aggressive action to be part of this revolution or risk being left behind.

At TeAM Incorporated, we are identifying like-minded partners that are interested in the mutual discovery of AI processes critical to small business functions in sales, service, marketing, and any other connections that affect our business relationships.

We have (and are looking for) ideas for creating devices, programs, and developing applications and software that can perceive their environment and simulate and imitate the conscious decisions necessary for businesses to maximize the chances of success. The AI field draws upon knowledge from many fields. We are casting a wide net to bring together a cohesive group of small businesses and entrepreneurs that can ADAPT, INNOVATE & CREATE™ to stay relevant in the game with an ever-changing global environment.

Follow us and stay tuned for **“Part Two - AI Promises...”**
