## Part Three

# AI Integration into Business

So how does one realistically integrate Artificial Intelligence (AI) into their business -- as a provider or a customer -- given the technical implications and financial risks? Most small businesses have limited budgets and typically lack deep benches when it comes to tech expertise. They have many other things competing for their money -- like office space, equipment, or new hires. When they look at the percentage of their total budget that might go to new tech, they want to make sure it is spent on something that will give them the best bang for the buck.

The good news is that in partnership with TeAM Incorporated, you do not need a squad of data scientists to gain access to, or value from, AI, we provide all that. Our goal is to partner with like-minded businesses and customers to create products and services that not only simulate the conscious human judgments, but also have a direct connection between a recognized need and a return on investment.

At TeAM Incorporated, we are giving our power, passion, and energy to the creation of products infused with AI consciousness in the effort to bring solutions to complex problems to market. If the prospect of mutual discovery and building a place for your company on the technological landscape is right for you, contact us at [contact@linknxtgen.com](mailto:contact@linknxtgen.com).
