Part Six – Ways to Differentiate

Part Six

Ways to Differentiate

When creating LinkNxtGen we looked at ways to differentiate our product from the herd. We designed it to be an enterprise solution for agile data collection and visualization with the ability to generate automated insights for variances through the root-cause level for immediate action.

Our secure platform can analyze multiple data sets from multiple data sources. Our advanced analytics can be performed by an end user without heavy IT coding or support. We enhanced our LinkNxtGen product to include LinkNxtGen BI.

With LinkNxtGen and LinkNxtGen BI we've created a product that provides customer satisfaction, cost control, cost reduction, revenue generation, achievement of business goals, and the ability to be proactive vs reactive in decisioning and resolution. LinkNxtGen BI can visualize data across multiple dimensions, aggregate data from multiple data sources and drill down into granular dimensions to find and resolve root-cause issues.

TeAM, Inc. is excited about the future and is looking to work with interested parties to develop applications that will support and enhance the direction that the world is headed. Interested in working with us? Contact TeAM Incorporated at “contact@linknxtgen.com”. Ask for Charles Davis.
